

# Controll-A-Door® P

DIAMOND SERIES

THE 'ELITE' GARAGE DOOR OPENER FOR  
SECTIONAL AND TILTING GARAGE DOORS

The B&D Controll-A-Door®P Diamond Series has been designed to suit most types of sectional and tilting residential garage doors. With its sleek curves and contemporary design, it's the automatic door opener for the style conscious.

GET IT ALL WITH A B&D CONTROLL-A-DOOR®P

## SUPERIOR DESIGN

### 1. Convenience

You will really appreciate an automatic garage door opener on those cold, dark, rainy days. With just the push of a button you will be able to drive straight into your garage.

### 2. Comfort

You can enter and exit your garage from the comfort of your car without struggling with heavy doors.

### 3. Safety

In and out of the car at night, parking on steep drives and entering dark garages are all things of the past with a B&D Controll-A-Door®P Diamond Series automatic door opener.

### 4. Security

B&D's Controll-A-Door®P Diamond Series automatically locks every time it closes. With ease of garage entry you also use the garage more.

### 5. Value

A B&D Controll-A-Door®P Diamond Series represents excellent value for money and will add value to your home.

Full 5 year warranty on the opener including labour to repair when installed by an authorised B&D Dealer.

## ADVANCED FEATURES

### Convenient Keyring Transmitter

Your two 3-Channel remote control keyring transmitters are pre-programmed with your own security code. With over

3,486,000,000 unique codes you get the ultimate in security.

### Multi Function Control Panel

Even in a dark garage it's easy to find your way to B&D's illuminated Control Panel. Locks out all outside radio signals while you're away for added

security. Includes an adjustable light timer and an oversized illuminated push button. An ideal accessory for Arthritis sufferers.

### Soft Start / Soft Finish

The Controll-A-Door®P, Diamond Series opener is programmed to open a garage door slowly, then speed up, and come slowly to a stop. Smoothly

and quietly. Door travel limits can be easily set with the new Diamond Series automatic door opener.

### Automatic Close Timer

B&D's Controll-A-Door®P Diamond Series is equipped with auto close. After you drive in or out, the door waits for your programmed time (30-180secs), then

closes all by itself. This system requires B&D's Safety Infra-red Beam Kit in order to function.

### Safety Infra-Red Beams

The opener is compatible with B&D's safety infra-red Beam Kit which can be installed for safety. The sensors are mounted on either side of the garage door opening and project an infra-red

beam across the opening. When the door is travelling down and the beam is broken, the door will reverse and open to its fullest extension without touching the object, which broke the beam.

### In-built Automatic Safety Reverse System

To assure safety of operation, the door automatically reverses when it encounters an obstruction while

closing. If the door encounters an obstruction whilst opening, it stops. Peace of mind for you and your family!

### 433MHz Frequency

Operating on 433MHz radio frequency for improved reception and less interference,

the Diamond Series opener automatically resets all settings after a power failure.

### Courtesy Light

Each opener provides one light (maximum of 40watts) which is automatically controlled by the logic

board. The light automatically turns on when the opener is activated and turns off automatically after 2½ minutes.

### Light Switch

The Controll-A-Door®P, Diamond Series has a light switch. With this feature the light on the opener can be manually turned "on" and "off" by pressing

the "Light" push button on the Multi Function Control Panel. The light may be turned off during the 2½ minute automatic cycle.

### Lock/Security Switch

The Diamond Series opener has a lock/security switch. With this feature the indicator light behind the door control pushbutton (located on the Multi Function Control Panel) will flash when the lock/security switch is on.

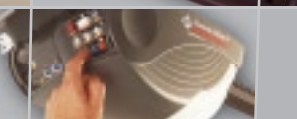

In this condition the receiver will not accept signals from the remote control. The door will, however, open and close by activating the pushbutton, key switch or Keyless Entry System.

### Smart Receiver

Smart Technology allows you to electronically program up to 12 remote

control transmitters plus one entry keypad at the touch of a button.

### Manual Disengagement Cord

Easy to disengage cord allows you to manually operate the door in the case of a power failure.

### Positive Lock

When the garage door is closed, the motor ensures the door is positively

locked with no need for you to remember to lock the door.

\* 12 month warranty of transmitters. Globes and batteries excluded.

## SOME OF OUR OTHER PRODUCTS

B&D also manufacture rolling garage door openers and an extensive range of sectional and rolling garage doors.

## ACCESSORIES

### Additional Remote Control Transmitters

For multiple person or vehicle use, additional 2 and 3 channel hand held transmitters offer maximum convenience and security. They come complete with a visor clip for securing your transmitter to your car's sun visor.

### Emergency Key Release

This allows it to be disengaged and operated manually from outside the garage. It is recommended for use where the garage door is the only entry point to the garage.

### Entry Keypad

Allows entry to the garage without a remote control transmitter. Operates via your own 4-digit security PIN. No wiring required.

### Safety Infra-red Beams

For added safety and security the door will automatically stop and reverse if the beam is broken.

### Transmitter Wall Button

Allows remote operation within 10 metres. No wiring required and can be mounted inside the home or garage.
